

Trikka

Dog Trainer

Instructions

*Congratulations on
being the new owner of
Oggi's Trikka Dog Trainer.
It's a training revolution!*

Open the Trikka door and load with your selected training treat*. Oggi's Trikka Treats are recommended as they have been carefully selected for optimum Trikka functionality as well as for flavour and premium nutrition - you will find a 30g pack of Trikka treats inside this box, and 250g refill packs are available.

Be careful not to overload your Trikka, otherwise this may jam the smooth operation of the treat dispenser.

Between treats, give your Trikka a little shake to ensure the next treat is ready to dispense.

*If you are using other training treats please test the operation of the dispense function BEFORE commencing a training session to ensure that they are the correct size to easily move through the trapdoor.

How to fill, operate and hold your Trikka

How to Trikka Train your dog

Clicker training is a reward-based method which keeps the dog engaged and makes training easier and quicker. The TRIKKA is designed so that the "click" is instantly followed by a reward.

First you need to teach your dog that the "click" noise means that a reward will follow. So once you have loaded your Trikka with treats, find a quiet place with no distractions. Press the dual buttons together in order to Click and dispense a treat and immediately give this reward to your dog. Repeat this several times until your dog gets the idea that when they hear the "click" this means a tasty treat will follow – you now should have his (or her) attention!

Test to make sure your dog has understood the click and reward process by waiting for him to look away. Once he (or she) does, Click, and he should immediately look round in anticipation for the treat to follow. If he does not do this, then a few more repetitions of the above sequence are required. Once your dog associates the click and the reward, you are ready to commence your specific training.

When your dog does something right, click *immediately* and reward *as soon as possible*. We want the dog to make the association Good Behaviour>Click>Treat.

Once your dog associates good behaviour with the Click, he knows he has done something right, and that he will soon be rewarded. Good dog!

*"Remember,
the Click is never
used as an
instruction.
It is to mark the
moment that the
correct/required
behaviour is
achieved!"*
